### DIVERSE:

STTG: Very few birds, but the first willow warbler of the year was nice! As with the barn swallow and the redstart, it was quite an early bird (the 2nd earliest caught in Ottenby). Other highlights were a wagtail and 2 black redstarts.

AND: nothing caught.

Div: In the morning ALD left to Stockholm to pick up the lure ducks for the duck trap. After lunch MHM held a very interesting presentation about the STTG results from last year and the report that he sends to the Swedish Environmental Protection Agency that is based on that data. We had noticed some problems with the inner door of A-trap so the workers who built the structures back in February came back to fix it. Afterwards JSA and KWL re-did the netting around the problematic area. UTE left. FMN and ERD did some double checking of the data from the last week or so.
