OTTENBY FÅGELSTATION

---

Div Today: taking advantage of the nice weather: the team went out to the Southern meadows to do a survey of the nesting ringed plovers there: many of which are colour ringed. They found 18 ringed plovers, 2 of which were colour ringed. We also did a plover survey along fyrvägen, finding 63 (9 of which colour ringed). It seems they are arriving in full now! We also did more finishing touches on the ducktrap, like placing heavy rocks to keep the underwater fencing stable. Robbans nets needed a bit of fixing so ALD took care of that. After dinner most of the team went up the Lighthouse to enjoy the sunset! Later in the evening a big nightcatching effort was done. There was a short-eared owl that was seen almost going into the owl net, and we found owl feathers in the net so it seems we missed it by just a pinch! Other than that a schinzii dunlin and a purple sandpiper were caught and ringed, as well as 2 grey partridges that were already ringed earlier this year.
