Gransångare 1
Kungsfågel 2
Talgöxe 1
Gråsparv 1
Hämling 2

Totalt 64 individer av 10 arter.

Ringmärkare: ALD, ERD, JVJ, JMS, FMN

DIVERSE:

STTG: Finally a bit more birds! Highlights were the first lesser whitethroat for the year and another blackcap, as well as lots of wrens (30!).

AND: Nothing caught.

Div: Half of the personnel went to a forest near Kalmar early in the morning to try to see capercaillie and black grouse. They arrived 1 hour before sunrise and found it to be snowy! They got a good observation of a female capercaillie and a less good observation of a male, and also heard a black grouse singing. Surprisingly they didn't hear any capercaillie lekking in the place they're usually lekking at this time of year, but they had lots of fun anyways! The other half of the team stayed behind and did STTG, enjoying the pleasant weather and good amount of birds. After some long naps in the early afternoon, we resumed the ping-pong tournament.
