Lövsångare 8

Bergfink 1

Steglits 1

Grönsiska 1

Hämling 3

Totalt 148 individer av 15 arter.

Ringmärkare: JSA, HXF, FMN, JVJ, ALD, SAN, MHM, JMS.

DIVERSE:

STTG: Finally good numbers in the trapping! Quite a lot of chiffchaffs. A long eared owl found its way into the net in mid-morning which was surprising. After release it was seen climbing several hundred meters in altitude and setting off north! Other highlights were 9 blackcaps, 4 common redstarts, a goldfinch, a white wagtail and two lesser whitethroats.

AND: In the ducktrap another nice surprise: a gadwall! A super nice 2nd calendar year male. It was taken back to the station to be photolabbed and for everyone to appreciate. This is the only dabbling duck species we didn't catch last autumn in the ducktrap so its awesome that this year we already caught one!

Div: The reporters from SvD joined us in the ringing again. There were also 2 guidings that FMN and ALD took care of. To celebrate a pleasant day with good ringing and good weather we had lunch at the restaurant. In the afternoon Nordens Ark came to release 50 adult european green toads at the cape as part of the continued reintroduction and monitoring program. We got to release them ourselves which was super cool! Later in the afternoon JSA caught a beautiful adult male brambling in the helgoland trap.
