Gransångare 4

Lövsångare 1

Kungsfågel 1855

Mindre flugsnappare 1

Trädkrypare 5

Bofink 7

Gråsiska 2

Sävsparv 1

Totalt 2178 individer av 15 arter.

Ringmärkare: FOG, NBR, SSL, TLN, ALN, HAN, MSL, ILS, JBC, ALD, VMK, NMK, FKL, MCO, TSR, MHM, SAN, M.fl

DIVERSE:

BIG DAY... From what started similarly to the last few days, 2 rounds in, it quickly became apparent that there was no slowing and Goldcrests quickly filled all possible net space and the garden was alive. A spectacle new to many of the staff and certainly one to remember. After a few very busy rounds, numbers were already way above the 1000+ mark, numbers slowly began to drop but rounds continued until 15:30 in the afternoon. A big thank you to all those who helped and especially Anders and Carina for fixing food and coffee for busy volunteers and ringers throughout the late morning. In the evening, numbers of Goldcrest remaining very large in the forest, Alva, Felix and Frank tried their luck at a possible Yellow-Browed Warbler amongst the flock but left instead with a further 146 Goldcrests added to today's total. Amongst the Goldcrests, a young Red Breasted Flycatcher also trapped this morning along with the first autumn Blackbird, Meadow Pipits and a Sedge Warbler.
