OTTENBY FÅGELSTATION

This morning we spotted a Brent Goose colour ring red D on left black F on right. Will report.

SPT and AMN went on a big shopping trip to Kalmar. After picking up TLN and SSL in the newly repaired station car, we headed to IKEA, Nybloms, Baltic, Hagblöms, and ICA (for food- the most important thing). We now have paint for the second coat on the veranda, string for fixing the nets, and new Ottenby Bird Observatory T-shirts and jackets!

For the others, they spent the warm afternoon outside fixing wader cages and entering data. LSK scaled the lighthouse to take pictures for the Green Toad project, and we had a visit from Susanne Forslund, who runs aforementioned project.

The evening was bright and cool, and another perfect occasion to search for Tengmalm's owls. It didn't take long before we caught our first for the season! It was a beautiful creature, and an amazing experience for most of us who have never seen one before. Fingers crossed for more this season!

Ringling in Södra Lunden for the Yellow-browed Warbler project took place.

GNK trapped Nightjars in the Ottenby recording area for the purpose of his PhD project.
