Swan! We have yet to figure out how it managed to fit through the doors...it provided quite the challenge to age, with only a few grey feathers left from its juvenile plumage and growing out all its primaries.

However, before we get to the ducks, we had to jump start the duck car. At last, both cars are once again fully functional.

TLN, SSL and IDM headed to Södra Lunden to try to mist net Yellow-browed Warblers again. Though they had no luck with the warblers, they did catch a few beautiful Goldcrests.

Another (quicker) trip to Kalmar for extra food shopping and to pick up SAN and ZPR.

In the afternoon we painted the veranda, fixed more wader cages, and entered diaries and data. Details for our duck conference which will happen next week were finalised. The conference will see us joined by waterfowl researchers from all over the world, and we will have some interesting lectures going on in the library lead by JWM!

Our first Red-Throated Pipit for the station personnel was on the Södra schäferiängarna!

In the cool, starry night, we went out into the garden to look for owls, and were rewarded with an incredible male Long-eared Owl! Another amazing end to the day!
